Einkorn & Spelt Cinnamon Rolls

Converted by Baking Great Bread at Home

Soft, tender, and wholly whole grain.

Recipe Summary

Total Flour: 480g
(54g in levain, 407g in final dough)
Total Water: 307.5g
(77g in levain, 0g in final dough)

Ingredients

Levain / Starter

Ingredient	Amount	Baker's %
Active sourdough starter (100% hydration)	38g	8%
Water (80-85f)	77g	16%
Fresh-milled spelt flour	54g	11%
levain subtotal	169g	0%

Dough

Ingredient	Amount	Baker's %
Fresh-milled einkorn flour	23g	5%
Levain (from above): 192g		40%
Fresh-milled spelt flour	269g	56%
Fresh-milled einkorn flour	115g	24%
Whole milk	116g	24%
Whole milk, lukewarm	58g	12%
Large egg	50g	10%
Cane sugar	50g	10%
Unsalted butter, softened	88g	18%
Fine sea salt	8g	2%
Unsalted butter, very soft	56g	12%
Dark brown sugar, packed	130g	27%
Ground cinnamon	14g	3%
Ground cardamom	1g	0%
Cream cheese, softened	115g	24%
Pure maple syrup	40g	8%
Powdered sugar	60g	13%
Vanilla extract	4g	1%
Unsalted butter, for the pan	10g	2%

Total Hydration: 64%

Note: The levain flour and water are included in both the levain section and the total calculations. This is standard practice in baker's formulas.

Method

1. **1. BUILD LEVAIN (NIGHT BEFORE)**
   Mix 38g active starter, 77g water (80-85F), and 77g flour. Cover loosely and rest overnight (8-12 hours) until doubled and bubbly. This provides 20% inoculation for this enriched dough. 8-12 hours overnight

2. **2. MIX DOUGH (MORNING)**
   In a large bowl, dissolve levain into liquids (water + milk). Add 384g flour and mix until shaggy. Rest 30-45 minutes (autolyse). Add softened butter gradually during first fold, not in initial mix. Add eggs at room temperature after autolyse. 30-45 min autolyse

3. **3. ADD SALT & DEVELOP STRENGTH**
   Sprinkle in 8g salt, mix or pinch to incorporate throughout the dough. Rest 20-30 minutes to allow salt to dissolve and gluten to relax. 20-30 min rest

4. **4. BULK FERMENTATION**
   Perform 3-4 sets of stretch and folds every 30-45 minutes during the first 2-3 hours. Enriched doughs ferment more slowly due to sugar and fat. Bulk fermentation may take 5-7 hours at 75-78F. Stop when dough has risen 50-75% and looks airy. 5-7 hours at 24-26C (75-78F)

5. **5. SHAPE**
   Turn dough onto lightly floured surface. Shape into desired form (rolls, loaf, etc.). Enriched doughs are softer and more forgiving to shape. 10-15 min

6. **6. FINAL PROOF**
   Place shaped dough in greased pan or banneton. Proof 2-3 hours at room temperature until puffy and nearly doubled. When pressed, dough should spring back slowly. 2-3 hours room temp

7. **7. BAKE**
   Preheat oven to 375F (190C). Brush with egg wash if desired. Bake 25-35 minutes until deep golden and internal temperature reaches 190-195F. 25-35 min a 190C (375F)

8. **8. COOL**
   Cool on wire rack for at least 1 hour before slicing. 1 hour minimum

Baker's Notes

! Tangzhong Detected: This recipe uses a cooked flour-water roux. Maintain this step in your converted recipe for the signature soft texture. Cook 1 part flour with 5 parts liquid until thick, cool completely before adding to dough.

i Cold Fermentation Detected: This recipe includes cold fermentation. This technique works for both yeast and sourdough-it develops flavor and makes timing more flexible.

i High fat content (21% of flour). Fat inhibits gluten development and slows fermentation. Knead longer to develop structure, and expect a rich, tender crumb with shorter shelf life.

i High sugar content osmotically stresses yeast. First rise may take 25% longer than standard recipes. Be patient-yeast will adapt and ferment successfully.

i High butter content creates very soft dough. Chill dough for 15-30 minutes if too soft to handle. Cold butter firms up, making shaping much easier.

i Milk-based doughs create softer crumb but can slow yeast activity if milk is cold. Warm milk to 100-110F before mixing for optimal fermentation speed.

i High-fat enriched doughs benefit from stand mixer with dough hook. Hand kneading is possible but takes 15-20 minutes to fully develop gluten through the fat barrier.

i Enriched yeast doughs work best when butter is added after initial gluten development. Mix flour, liquid, yeast, and sugar first for 3-5 minutes, then gradually add softened butter.

& Enriched doughs brown faster due to milk proteins and sugars. Start baking at 375-400F (not 450F). Watch closely after 20 minutes and tent with foil if browning too quickly.

i Starter is 40% of total flour weight, which is higher than typical (15-25%). This will speed up fermentation but may taste more acidic.

i Tangzhong: Cook 50g flour + 50g water to paste; subtract from recipe water.

Substitutions

Original	Substitute	Ratio
Whole milk	Water	1:1
Whole milk	Plant-based milk (soy, oat, almond)	1:1
Whole milk	Buttermilk	1:1 (add 1/4 tsp baking soda per cup)
Eggs (whole)	Flax eggs (vegan)	1 egg : 1 tbsp ground flaxseed + 3 tbsp water
Eggs (whole)	Aquafaba (chickpea liquid)	1 egg : 3 tbsp aquafaba
